## **MedNet launches a Contrast Controller Handset for the Acist CVI™ Contrast Delivery System**

- Additional supply chain
- All components individually CE-marked and bulk non sterile
- Also available: high-pressure stopcock and a high-pressure extension line

2022-18-10 MedNet GmbH, a supplier and service provider to the medical device industry, is launching a Contrast Controller Handset as a disposable accessory for the proven Acist CVI™ Contrast Delivery System. The MedNet Contrast Controller Handset provides individual buttons to activate the automated delivery of contrast media or saline and allows consistent and repeatable activations.

As an alternative to the OEM component, the launch offers the market an additional supply chain option for the hand controller as well as other related components used: a high-pressure stopcock and a high-pressure PUR braided extension line, both rated to 1200 PSI. All components are available individually CE-marked and bulk non sterile.

Ole Stein, General Manager at MedNet comments: “We are pleased that we can now offer the market an alternative to the traditional solution. Another plus for our customers is that we also have the other components available that are used along with the handset.”

### **MedNet**

Since 1990 MedNet GmbH has been a competent service provider and supplier for the medical device and pharmaceutical industry. As a European company with headquarters in Germany it offers a wide portfolio in standard components from well-known manufacturers as well as own product lines for interventional radiology, infusion technology and others. Furthermore MedNet provides a worldwide well established network for medical materials and manufacturing providers offering distribution and marketing channels to the European market. With this extensive portfolio MedNet can provide various and customised solutions for medical device manufacturers from one hand. MedNet is ISO 13485 certified.
