Press Release

MedNet launches three new Tuohy Borst Adapters and expands its portfolio of valves

Münster, May 31, 2022 – With the Tuohy Borst Adapter, MedNet offers a safe and simple solution to provide secure closure around medical instruments such as catheters – without backflow of body fluids during placement of devices. This makes them suitable for a variety of interventional and diagnostic procedures.

The Tuohy Borst Adapter helps to reduce blood loss in catheters for applications such as atherectomy, thrombectomy, catheter ablation and external direct access catheter ports. As endoscopy port seals, the Tuohy Borst Adapter helps to prevent fluid or gas loss in endoscopy access ports and could also be used as a laser / RF device access port for varicose and peripheral vein closure.

In addition to the standard Tuohy Borst Adapter (No. 10200007), MedNet also offers an adapter with Female Luer Lock Sideport (No. 10200008) and a Tuohy Borst Adapter with 15cm extension line with Female Luer Lock (No. 10200009). All models are available in 9 French (Tuohy Borst connector) and 3.1mm (Male Luer Lock). The body of the adapter is made of polycarbonate, which ensures high transparency and good impact resistance.

With the Tuohy Borst Adapter MedNet expands its broad portfolio of valves, which also includes Luer Activated Valves, Needleless Valves, Dual Check Valves, Pressure Activated Valves and Y-PTCA Connectors.

About MedNet

Since 1990 MedNet GmbH has been a competent service provider and supplier for the medical device and pharmaceutical industry. As a European company with headquarters in Germany it offers a wide portfolio in standard components from well-known

Your Partner for Components, Materials & Services

manufacturers as well as own product lines for interventional radiology, infusion technology and others.
